

FITZROY

ACDC SURVEY DATA

Collected: 17 January 2022 - 13 May 2022

Published: June, 2022

BACKGROUND

Assisting Communities through Direct Connection (ACDC) is a project of Community Mental Health Australia (www.cmha.org.au). The ACDC project offers an innovative, proactive outreach approach to linking people with services and assessing community needs. Rather than waiting for people to present to services and ask for help, the ACDC project reaches people by knocking on the doors of householders and offering information about supports and services. Householders were also asked to complete a survey, with the findings analysed and presented by the Centre for Social Impact.

Fitzroy was one of at least 20 sites across Australia visited by People Connectors (trained staff knocking on the doors of householders). The ACDC project partnered with **JobCo**, a not for profit incorporated association, to deliver this door-knocking initiative in Fitzroy. A total of **2081** doors were knocked on by the People Connectors and **539** people engaged with a People Connector. In addition, **336** householders responded to a survey about mental health needs and access to services in their community.

The following statistics reflect findings from the group of people who answered the survey. A more detailed analysis of the data and impact of the ACDC project will be available later in 2022. Visit acdc.org.au to sign up for updates.

336 HOUSEHOLDERS RESPONDED TO THE SURVEY

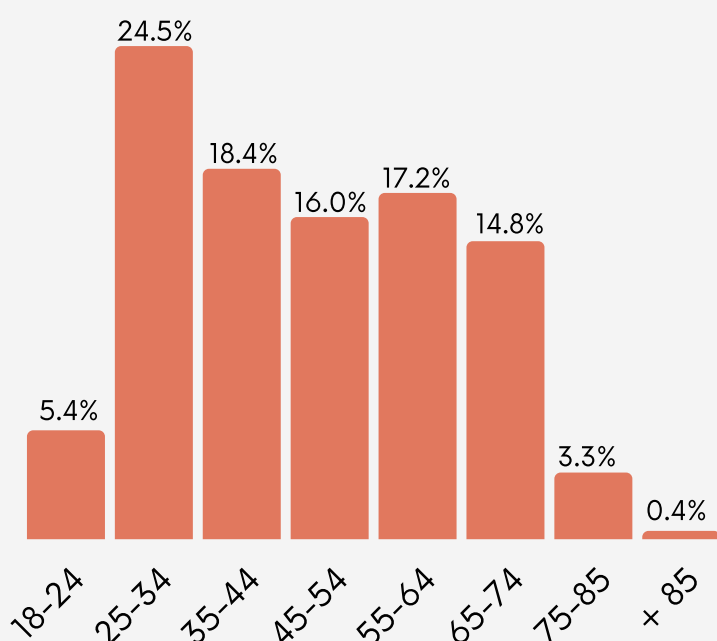

WHO ANSWERED THE SURVEY

GENDER

3.0% OF RESPONDENTS IDENTIFIED AS BEING ABORIGINAL AND/OR TORRES STRAIT ISLANDER

AGE GROUP

25% OF RESPONDENTS WERE BORN OUTSIDE OF AUSTRALIA

ALL SURVEY RESPONDENTS SAID THEY USUALLY SPEAK ENGLISH AT HOME

"I think that the door knocking method works. Householders were able to regurgitate the things that were bothering them, and they felt capable of having those discussions. Often times, we left a paper survey with a household and, in those instances, I was hoping that those questions prompted people to share information with whoever they're living with; to open up a conversation about mental health."

– People Connector

HOUSEHOLDER CONCERNS

We know that mental health is shaped to a great extent by the social, economic, and physical environments in which people live. This section looks at some of the social determinants of mental health outcomes identified by the Fitzroy respondents.

LOCAL COMMUNITY CHALLENGES

PERCENTAGE OF HOUSEHOLDERS WHO PERCEIVED THE FOLLOWING ISSUES AS A LARGE PROBLEM OR CHALLENGE FOR PEOPLE IN THEIR LOCAL COMMUNITY:

"House prices have soared during the pandemic. The lockdowns caused my partner to become emotionally unstable and our relationship dissolved. This trauma has caused PTSD which I am now seeing a psychologist for."

– Householder

INDIVIDUAL CHALLENGES

PERCENTAGE OF HOUSEHOLDERS WHO PERCEIVED THE FOLLOWING ISSUES AS A LARGE PROBLEM OR CHALLENGE IN THEIR OWN LIVES:

"I live with mental health issues. If it wasn't for my dog, I wouldn't survive. I have been waiting for public housing for two years. I help those who have a roof over their head, meanwhile, I have nothing."

– Householder

IMPACT

MENTAL HEALTH

Mental health relates to social and emotional wellbeing. Positive mental health allows people to appreciate their full potential and cope with stressors. This section outlines peoples' self-reported mental health status at the time of survey. Clinical measures (as presented below in the WHO-5 and K10) focus on signs and symptoms. However, we acknowledge that mental health, wellbeing and personal recovery is much broader and is about leading a good life.

WELLBEING

The **World Health Organisation Wellbeing Index (WHO-5)** is a short self-report measure of current mental wellbeing. This subjective quality of life measure is based on positive mood, vitality, and general interest in life. A higher score indicates better wellbeing. The WHO-5 has been found to have adequate validity in screening for depression. Scores lower than 50 are indicative of possible depression, where further assessment with clinical measures may be required.

PSYCHOLOGICAL DISTRESS

The **Kessler Psychological Distress Scale (K10)** is widely used as a measure of psychological distress from low to very high, based on a score from 10 to 50. The following figure compares aggregated K10 data from Fitzroy respondents to data from the Australian Bureau of Statistics (ABS) National Health and Wellbeing Survey 2017-18 (normative data, or norms).

MENTAL HEALTH ISSUES

37% OF HOUSEHOLDERS SAID THEY CURRENTLY HAD, OR WERE LIVING WITH, MENTAL HEALTH ISSUES. MOST OF THESE PEOPLE (72%) REPORTED THAT THEY HAD RECEIVED A FORMAL DIAGNOSIS OF A MENTAL HEALTH CONDITION.

Individuals may seek a clinical diagnosis, or identify with certain mental health conditions. For some, a diagnosis can be useful and meaningful; for others, they may prefer to avoid diagnostic labels, although still may identify as living with a mental health condition. Individuals do not need a diagnosis to validate their struggles or suffering.

RESPONDENTS WHO REPORTED HAVING OR LIVING WITH MENTAL HEALTH ISSUES IDENTIFIED WITH THE FOLLOWING MENTAL HEALTH CONDITION(S):

Multiple responses permitted; PTSD = post-traumatic stress disorder; MHC = mental health condition.

SUPPORT NEEDS

Many people, regardless of whether they have a mental health condition or not, may want (or need) to seek mental health care. However, there can also be barriers to accessing these supports. Mental health and wellbeing supports and services are increasingly available online, but these are only an option for people and households that have access to suitable digital infrastructure.

55% OF ALL HOUSEHOLDERS INDICATED THEY WANTED TO SEEK HELP FOR THEIR MENTAL HEALTH IN THE PAST 12 MONTHS*

27% OF THESE HOUSEHOLDERS SAID THEY DID NOT GET THE HELP THEY NEEDED

*We asked respondents, "In the past 12 months, was there a time when you wanted to talk with someone, or seek help about, stress, depression, or problems with emotions?"

BARRIERS TO HELP-SEEKING

REASONS FOR HOUSEHOLDERS NOT RECEIVING HELP FOR MENTAL HEALTH INCLUDED*:

*Multiple responses permitted; refers to the householders who wanted to seek help for their mental health but did not get the help they needed.

ADDITIONAL SUPPORT

17% OF ALL HOUSEHOLDERS FELT THEY WOULD BENEFIT FROM MORE SUPPORT FOR THEIR MENTAL HEALTH AND WELLBEING

PREFERENCE FOR ADDITIONAL SUPPORT(S) INCLUDED*:

*Multiple responses permitted.

45% OF RESPONDENTS IN HIGH OR VERY HIGH PSYCHOLOGICAL DISTRESS FELT THEY WOULD BENEFIT FROM MORE SUPPORT FOR THEIR MENTAL HEALTH

DIGITAL INFRASTRUCTURE

5% DO NOT HAVE ACCESS TO A COMPUTER OR OTHER DEVICE

DO NOT ALWAYS HAVE ACCESS TO A MOBILE PHONE **30%**

12% DO NOT HAVE CONSISTENT ACCESS TO INTERNET WITH SUFFICIENT SPEED AND DATA

DO NOT ALWAYS HAVE A PRIVATE SPACE TO SPEAK TO SOMEONE ONLINE ABOUT THEIR MENTAL HEALTH **13%**
